

# Encourage your collaborators to create your applications in No Code, while strengthening security and compliance

Companies and their CIOs face the triple challenge of accelerating digital transformation through No Code while securing and controlling access to data and systems. At the same time, they need to organize their remote collaborators' work.

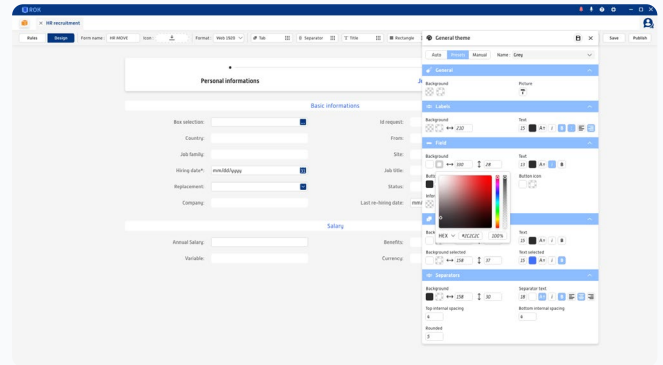

## No Code platform

Low-code will represent 2/3 of IT projects in 2024 *(Gartner)*

[Find out more](#)

ROK makes it possible to create any application quickly and nimbly by delegating to the business what used to be the domain of IT

A Low-Code Application Platform (LCAP) is the promise of an environment that allows you to create applications through a graphical interface with little to no code. The ROK No Code does not require any programming.

## Compliant & secure by design

Cyber crime has exploded by + 238% in 2020 *(Modern Bank Heist Report)*

Identity and Access Management (IAM) is the discipline that enables the right people to access the right resources at the right time for the right reasons. *(Gartner)*

ROK enables access and identity management as defined by the organizational chart and responsibilities, in integrity with your HR applications and other IT systems.

## Collaborative world

40% of European citizens worked from home in 2020 *(Eurofound 2020)*

[Find out more](#)

ROK allows you to instantly create both endogenous and exogenous project communities and provide them with project management, collaboration and Lean Management tools.

Remote work has thus become more fun, controlled and animated through user friendly & complete interfaces: chat, video, kanban, shared planning, Gantt and Pert trackings.
