

Simplification and Automation of ERP Systems in the Context of International Growth

How to centralize and secure SAP access at scale?

Elis, a leader in textile rental and care services, adopted ROK Solution to address the challenges of SAP access management driven by its rapid expansion — strengthening security, ensuring compliance, and reducing costs.

challenges of rapid expansion

- **Growth (+12% in 2023):** Presence in 28 countries with 45,000 employees across 400 sites, making SAP access management increasingly complex.
- **SAP access security:** Secure and compliant access management for thousands of employees.
- **Automation:** Need to automate role updates to reduce manual interventions.
- **Cost reduction:** Centralize access management and minimize ERP-related costs.

Results (ROI) after implementing ROK

10X COST REDUCTION

SAP access administration fully automated.

10X MORE COVERAGE

managed without increasing headcount.

5X FASTER DELIVERY

SAP authorizations granted more quickly.

< 1000 € MONTHLY COST

Support costs lower than SAP Access Control.

100% INTERFACING

Centralized management via CUA or direct connection.

Optimized and automated SAP access management

Standardization & Automation

- **Unified model** across 28 countries, with consistent global processes.
- **Real-time automation** of hiring, transfers, and departures.
- **Traceability and role optimization** for efficient and compliant access management.

Fast integration of new entities

- **Accelerated deployment** of new acquisitions.
- **Automated onboarding** via SAP HR, with access granted based on responsibilities.
- **Strict security** of authorizations.

Cost optimization

- **Fewer errors** through automation.
- **Optimized IT & HR resources** by reducing workload.
- **ERP streamlining** through centralized role and update management.

Architecture: Strength and flexibility of the ROK implementation

This diagram shows the centralized architecture deployed at Elis to handle SAP access, providing streamlined and secure management of authorizations across the entire SAP landscape.

- ✓ Management of roles, positions, and employees with organizational assignments and restrictions.

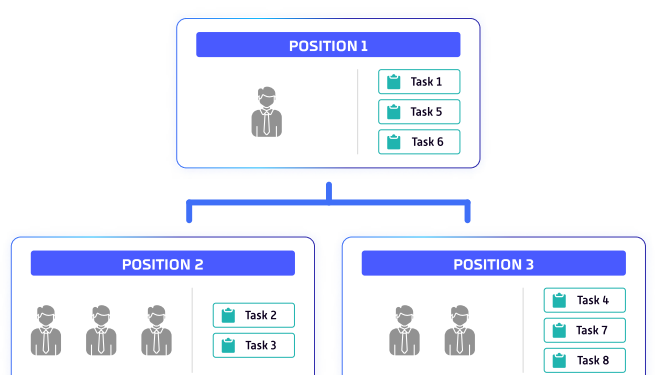

Import processing
by ROK

Mapping of roles to the organizational chart

Management of positions and employees (creation, modification, archiving).

Assignment of business roles and functional restrictions.

Authorization data
sent by ROK

- ✓ Automatic synchronization of roles (composite, single, derived).
- ✓ Fast rights assignment, with access granted within 1 hour.
